

Claims:

Please add the following new claims:

- sub. F1*
40. A switch assembly comprising:  
an upper wall, a bottom wall, and a circumscribing side wall cooperatively defining a  
switch chamber;  
a first switch element, at least portion of which extends into said switch chamber; and  
a shiftable body located within said switch chamber; and  
a component associated with said upper wall;  
said body and component cooperatively formed to be magnetically attractive so that the  
body is magnetically moved within said chamber by virtue of the presence of said  
component.
- E1  
cont.*
41. The switch assembly of claim 40, said bottom wall and said side wall comprising  
a second switch element.
42. The switch assembly of claim 41, said body being shiftable between a first  
position in simultaneous contact with said first and second switch element; and a second position  
out of said simultaneous contact.
43. The switch assembly of claim 42, said component comprising a magnet.
44. The switch assembly of claim 43, said body retained in said second position by  
virtue of the magnetic attraction between said body and said component and shiftable to said first

position in response to a change of magnetic condition proximal to the switch assembly.

E1  
contd.  
sub.F2

45 The switch assembly of claim 40, said first switch element presenting an elongated, rod-like configuration which is oriented in a substantially upright manner.

46. The switch assembly of claim 40, said component secured to said top wall.
